みどりのいば 環境日記 2007年

15 B() 17th July My maternal grand-mother stitched me 2 large cloth bags joining scraps of fabrics together to carry shopping to the house. It was I who suggested her to stitch me one like these to minimize the use of shopping bags to carry shopping. This idea I got from a book that I read. Hereafter I will was those hopes to bring shopping to the use these bags to bring shopping to the house and encourage others too to follow the suit.

10 BC , 19th July Today I planted some seeds of tamarind, brinjals, ladies fingers, chillies in separate big metal trays to get plants. I'm impatient to see them shooting up.

21st July I went to Kegalle to see the Greeting cards manufacturing centre using elephant dung. I was taken there by my art and craft teacher on an educational tour. Even from the elephant waste we could create things beyond imagination. It was marvellous and couldn't even believe my eyes. From the bocket-money I had I managed to buy a few greeting cards from there. I will send these to my friends and relatives. What a way to use elephant dung!

a BC 23rd July I did an environmental experiment to find out which rubbish is biodegradable (rot) and which is not. I came to a conclusion that natural rubbish rot away altogether but the man made rubbish does not decompose at all.

I have explained the experiment

with diagrams in my additional diary

16 B() 18th July

I was able to turn off a dripping public tap on my lane when I happened to pass that with my mother. She praised me for my good work and she explained me the value of water and how important for us to preserve it. I cannot even imagine a life without water on this plannet!

20th July Today I observed vehicles that sent out black smoke while I travelled to school. I told this to my class teacher. She was told this to my class teacher. She was good enough to explain me of the bad effects that it has on the environment. Now I fear of my life and of others for breathing in such smoke causes ling diseases and health hazards. I wonder why the responsible authorities don't take action to removing these unsuitable vehicles from on removing these unsuitable vehicles from the roads. Pathetic!

I read a paper article on 'Salvenia' and how it has become a threat to the national flower of Sri Lanka, the Blue water Lily. These destroy the water life and spreads rapidly. My father also educated me of some harmful plants to the environment in Sri Lanka such as 'Gandapana, Partheum, Nidikymba. He also said that the plant 'Gandapana' growing in Udawalawe National Park was removed recently by a group of environmentalists to pave way for the smooth growing of grass for animals there to gaze. , 22nd July there to gaze.

環境に関する気になったニュースを書いてみよう。 8 H Box

- * Hoping to see and contribute to improve the quality of the greenhouse project in my school.
- * Planning to put up a green tower (Pala Kanuwa) in my home garden
- * Looking out for dangerous or harmful plants in my school and neighbourhood.
